

NW Shelf & Indonesian Southern Margin 2D

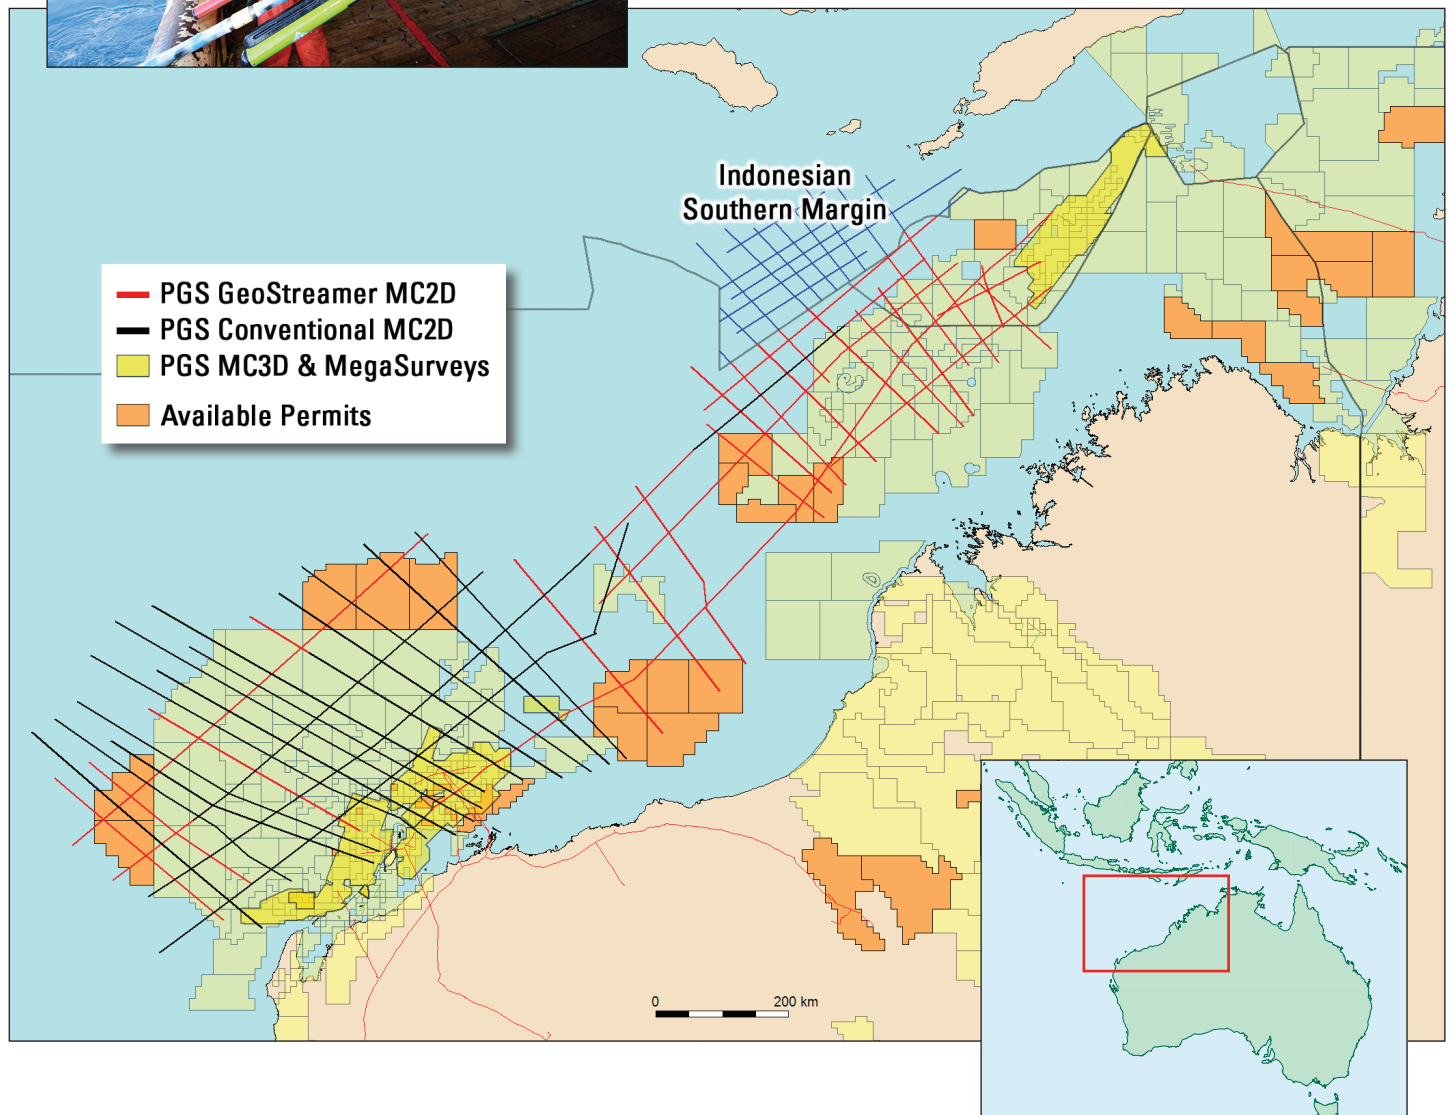

Deepwater NW Shelf (New Dawn) and Indonesian Southern Margin (ISM-07) MultiClient 2D Seismic Surveys.

21,000 km of long offset MC2D data along the NW Shelf and Southern Margin of Indonesia.

PGS has completed the first commercial seismic operation using its revolutionary dual-sensor streamer technology, the GeoStreamer®.

By a combination of wavefield separation in data processing and the availability of 8,000 m offsets, the New Dawn MC2D survey creates the best opportunity yet to improve regional understanding of the petroleum systems in this highly prospective region.
